

HTML Cheat Sheet

h1 - An h1 tag is the most important heading on the page. It is used for stuff like the title of the page.

```
<h1>Toronto Public Library Website</h1>
```

h2 - h2 tags can be used for things like subtitles.

```
<h2>Library locations</h2>
```

h3 - h3 tags are used for titles that are not as important as subtitles.

```
<h3>What's New</h3>
```

p - Paragraph tags are used to hold text.

```
<p>Zippo doesn't want to be an ordinary hippo. He wants to be super! Being good at swimming and splashing in mud aren't really superpowers, though.</p>
```

a - Want to link to another page or site? Use an anchor tag. The anchor tag has an attribute called href that is used for the link.

```
<a href="http://www.torontopubliclibrary.ca/">Books!</a>
```

img - If you want to put an image on the page, use the image tag. Add the image path to the src attribute.

```

```

HTML Cheat Sheet

ul - Want to make a list? Use the `ul` element.

```
<ul>
  <li>List item</li>
</ul>
```

ol - Want to make an ordered list? Use the `ol` element.

```
<ol>
  <li>List item</li>
</ol>
```

li - The `li` tag is used to make list items! The items go inside of a `ul` or `ol`.

```
<li>A list item!</li>
```

article - Used to group your content together.

```
<article>
  <h2>Zippo the super hippo</h2>
  <p>Zippo doesn't want to be an ordinary hippo. He wants
to be super! Being good at swimming and splashing in mud
aren't really superpowers, though.</p>
</article>
```

HTML Cheat Sheet

section - A tag used to contain multiple groups of content.

```
<section>
  <article>
    <h2>Zippo the super hippo</h2>
    <p>Zippo doesn't want to be an ordinary hippo. He wants
to be super! Being good at swimming and splashing in mud aren't
really superpowers, though.</p>
  </article>
  <article>
    <h2>Perfect picnic</h2>
    <p>A hilarious story from the author of Those Pesky
Rabbits about friendship, perfectionists, and losing your
sandwiches.</p>
  </article>
</section>
```

header - The header tag is used to show the header of a page or section.

```
<header>
  <h1>Toronto Public Library</h1>
</header>
```

footer - The footer tag can be used to group content together that completes the page or the section.

```
<footer>
  <p>Toronto Public Library © 2016</p>
</footer>
```
