

CSS Cheat Sheet

background: This property is used to add colour and images to an element's background.

```
section {  
    background: blue;  
}
```

color: This property is used to colour our text. (You need to use American spelling!)

```
h1 {  
    color: #333333;  
}
```

font-size: The font-size property lets you determine how big or small your text should be. We can use values like 15px or 90px to add size!

```
p {  
    font-size: 16px;  
}
```

font-weight: Do you want bold text, or just normal? Use the font-weight property to change the style of your text.

```
p {  
    font-weight: bold;  
}
```

letter-spacing: Want to create some neat spaced out text? Use letter-spacing to put more or less space between each letter.

```
h2 {  
    letter-spacing: 5px;  
}
```

CSS Cheat Sheet

line-height: Text too close together? Use line-height to add space between lines!

```
p {  
    line-height: 1.2;  
}
```

width: Width allows us to add dimension to our elements. We can use values like 300px or 45%.

```
article {  
    width: 25%;  
}
```

height: Height gives us the ability to size up our elements vertically.

```
div {  
    height: 100px;  
}
```

padding: Want a little space on the *inside* of your elements? Add some padding.

```
h1 {  
    padding: 30px;  
}
```

margin: Need space around something / between elements? Margin will help you do that.

```
article {  
    margin: 15px;  
}
```

CSS Cheat Sheet

border-width: Want to set a border? Use border-width to decide how thick it should be.

```
div {  
    border-width: 5px;  
}
```

border-style: Set a solid, dotted, or dashed border.

```
div {  
    border-style: solid;  
}
```

border-color: Use colours like, **red**, **green** or **palegoldenrod** to give your borders some colour!

```
div {  
    border-color: black;  
}
```

text-decoration: Want your text to have an underline? Use text-decoration to set an underline or overline.

```
h2 {  
    text-decoration: underline;  
}
```
